Investment approach

A multi-manager framework is utilised, where specialist investment managers are selected to form a diverse and complementary mix of investment strategies and styles. This can help reduce volatility by avoiding over exposure to a particular specialist investment manager. Derivatives may be used in managing the portfolio.

Investment strategy

The Implemented Fixed Income Portfolio invests in both Australian and International fixed interest markets, as well as diversified credit markets.

The managers within the Implemented Fixed Income Portfolio will invest across the broad spectrum of available debt instruments diversified by industry, maturity and credit rating (the majority of which will be investment grade as assigned by a recognised global ratings agency). Their portfolios tend to be diversified across hundreds of positions both in physical securities and through the use of derivatives. The diversified nature of their portfolios aims for the delivery of consistent returns above their designated benchmarks and acts to mitigate a large negative portfolio impact from any single position that may underperform from time to time.

The Implemented Fixed Income Portfolio blends a small group of managers that construct well diversified portfolios, who have a long-term and consistent track record, are expected to continue to deliver on this track record, and whose investment styles complement each other well. Consistency and complementary return profiles are of critical importance such that we can comfortably blend managers to deliver consistent and stable outperformance above the benchmark.

Sector Exposures

As at September 2025[^]
